

ABC: The White Paper (But Funnier)

A proudly valueless meme coin with no intrinsic value, no cash flows, and no promises. If you're reading this for investment advice, you've already failed the vibe check.

Abstract

ABC is a meme coin on Solana. It exists for memes, vibes, and social coordination. No utility is promised. Participation is voluntary and should be treated as entertainment.

Lore

Alexander the Great found a shiny coin in the sand and immediately invented ABC - backed by ambition, horse jokes, and zero fundamentals. We honor this legacy by launching a token that is both gloriously useless and strangely desirable.

Token Basics

- Ticker: ABC
- Chain: Solana
- Decimals: 9
- Supply: 5,000,000,000
- Taxes: 0%

Tokenomics

- Presale: 60% - public sale, fair-ish distribution
- DEX Liquidity at TGE: 25% - Raydium pool; Jupiter routes
- Airdrops: 5% - quests and community
- Marketing: 5% - awareness and antics
- Team: 5% - 3-month cliff, 12-18 month linear

LP tokens: lock or burn. Supply: revoke mint authority after launch.

Utility

None. What we offer instead: top-tier memes, a chaotic-neutral community, and a conversation starter at brunch.

Fairness and Unfairness

- No insider taxes.
- Liquidity at launch.
- The founder wants to outperform you. Transparency is the joke.

How It Works

- 1 Read this paper and breathe.
- 2 Verify the mint address yourself.
- 3 Swap on Jupiter and watch numbers move.
- 4 Post a meme about 'utility arriving any day now'.
- 5 Act surprised when number changes.

Roadmap

ABIEL CRYPTOCOIN ROADMAP

This is decorative. Like Corinthian columns.

Governance

One token equals one opinion and limitless arguments. Sample votes:

- Should the horse get a hat?
- Is 'no utility' our ultimate utility?
- Should the founder be allowed to outperform everyone? (Yes.)

Risks

- Market: Number may not go up.
- Smart-Contract: Code can have bugs.
- Liquidity: Pools can evaporate quickly.
- Social: Memes can turn on you.
- Foundational: No intrinsic value.

FAQ

- What backs ABC? Ancient ambition and contemporary audacity.
- When utility? When Bucephalus learns smart contracts.
- Are you really trying to make more than me? It's called competitive altruism.

Closing

ABC is a monument to speculation: shiny internet coins that make your brain release sparkles. May we all prosper. May I prosper just a smidge more. Verify the mint. Touch grass.
